EDUCATION

Netaji Subhas University of Technology

Bachelor of Technology in Electrical Engineering | CGPA: 7.89

New Delhi, India

Aug. 2019 – May 2023

WORK EXPERIENCE

Software Development Engineer

June 2023 – Present

Oracle

Bangalore, India

- Built an MCP-connected defect-resolution workspace integrating Confluence MCP, Jira MCP, and BugDB MCP for bug evidence and audit trails; reproduced issues and validated them against UI behavior and source code to reject false positives before generating fixes.
- Designed a repeatable AI-assisted operations workflow that translates natural-language investigations into bounded bastion, Kubernetes, and multi-pod log steps with run-key grouping and concise evidence summaries.
- Applied MCP-backed workflows to trace REST routing, request contracts, service configuration, Oracle data paths, and PMF failures to source code, logs, and exact payloads across BCE services.
- Owned design and delivery of a Direct-to-Management-Ledger capability using Java, Jakarta REST, React, TypeScript, Oracle SQL, and Liquibase with RBAC, validation, versioned audit history, and downstream workflow integration.
- Made long-running financial pipelines restart-safe with per-statement execution state, idempotent resume, configurable exponential-backoff retries, and run-keyed diagnostics, reducing resume time by **75%**.
- Implemented legal-entity fiscal-period validation for BCE Day 0 and Revaluation workflows, integrating request validation, execution history, PMF dashboard events, and resumable failure handling.
- Integrated the FetchRates REST API into BCE Revaluation and hardened exchange-rate loading against intermittent responses and null-data failures in FX-driven accounting runs.
- Architected a React and Spring Boot performance platform over **20+ SQL diagnostics**; adopted by **15+ engineers**, reducing investigation time from **30 minutes to 5 minutes**.
- Spearheaded migration of KYC microservices from **Spring Boot to Helidon**, reducing startup time by **40%** and memory usage by **25%**; contributed Helidon 4 and JDK 21 compatibility work across BCE services.
- Received the **Oracle Pacesetter Award** for improving QA productivity through the performance monitoring platform.

Product Analytics Intern

Nov. 2021 – Feb. 2022

Cympl Studios

New Delhi, India

- Analyzed telemetry for mobile apps with **1M+ downloads** using BigQuery and Tableau, defining product KPIs and improving analytical SQL latency by **40%**.

TECHNICAL SKILLS

Applied AI: Generative AI, AI Agents, Agentic Workflows, LLM Tool Orchestration, Model Context Protocol, Tool Calling, Prompt and Context Engineering, Human-in-the-Loop Controls, Guardrails

Languages & Frameworks: Python, Java, SQL, TypeScript, JavaScript, PowerShell, Bash, Helidon, Spring Boot, React.js, Node.js, C++

Cloud, Data & Tools: OCI, Kubernetes, Docker, Oracle DB, PostgreSQL, BigQuery, Liquibase, REST APIs, JDBC, CI/CD, Observability, Git

PROJECTS

BCE Engineering Copilot | Codex Workflows, Python, PowerShell, Kubernetes

2026

- Created a tool-connected workflow for deterministic bastion access, deployment inspection, and bounded multi-pod log retrieval with credential safety and human approval controls.
- Added reusable investigation steps for run-keyed BCE/PMF failures, exact API reproduction, and source-backed root-cause summaries.

MCP Defect Resolution Workspace | MCP, Codex, Git, Kubernetes, Confluence

2026

- Orchestrated selectable bug triage through Jira MCP and BugDB MCP, followed by reproduction, codebase validation, isolated branch creation, and fix generation through scoped tools.
- Deployed fixes to a test environment, invoked the internal test-run utility for PMF regressions, rechecked resolution, and gated commits on human approval while maintaining a Confluence audit trail.
- Reduced workspace token usage by 40% using deterministic tools and leader scripts, field-selective MCP retrieval, bounded and deduplicated logs, cached tool results, and structured state summaries.
